Profile

Experienced Full Stack Developer proficient in C#.NET, ASP.NET Core/MVC, and front-end technologies like Angular 20, HTML5, and Bootstrap. Skilled also in building dynamic web applications, integrating APIs, and working with SQL Server and Entity Framework Core. Passionate about modern tech trends, problem-solving, and delivering high-quality solutions.

Education

- Full Stack diploma, **Route Academy**,
- Bachelor of Commerce, **Al Azhar university**,

Feb 2021 - Feb 2022

Sep 2017. – July 2022

Work Experience

08/2023 – present PingSys
United Arab Emirates .Net Developer

05/2023 – present POS ZONE
Kuwait Full Stack .Net

Courses

03/2022 – 07/2022 Udacity's Full Stack Web Developer.
02/2021 – 02/2022 full Stack .NET.
05/2023 – 08/2023 EFE Egypt web developer.
09/2023 – 11/2023 IBM Web Developer.

Projects

Admin Dashboard - POC Project (Proof Of Concept)

- Developed using 3-tier architecture.
- Executed MVC CRUD operations using EF Core.
- Implemented Web API CRUD operations with Postman tests, Swagger documentation, and CORS policy.
- Utilized AutoMapper and Dependency Injection.
- Implemented Validation (Client/Server) Side.
- Incorporated various controls including Data Table and Jtable.
- Applied AJAX-based filtration, paging, search, sorting, and filtering.
- Implemented view injection and globalization using resource files.
- Modularized the project using MVC Areas.
- Enabled file upload and deletion.
- Integrated SMTP for sending emails.
- Applied Microsoft Identity for authentication and authorization.

Hosted and deployed using ASP Smarter ECommerce Shop - POC Project

- Followed a 3-tier architecture.
- Executed MVC CRUD operations using EF Core.
- Implemented Web API CRUD operations with Postman tests, Swagger documentation, and CORS policy.
- Utilized AutoMapper and Dependency Injection.

- Implemented Validation (Client/Server) Side.
 - Incorporated controls like Data Table and jTable.
 - Utilized AJAX-based filtration, paging, search, sorting, and filtering.
 - Applied view injection and globalization using resource files.
 - Modularized the project using MVC Areas.
 - Supported file upload and deletion.
 - Integrated SMTP for sending emails.
 - Applied Microsoft Identity for authentication and authorization.
- Hosted and deployed using ASP Smarter.

ECommerce API (Talapat)

- Developed using 3-tier architecture.
- Implemented Web API CRUD operations with Postman tests, Swagger documentation, and CORS policy.
- Utilized AutoMapper and Dependency Injection.
- Implemented Validation (Client/Server) Side.
- Applied AJAX-based filtration, paging, search, sorting, and filtering.
- Implemented view injection and globalization using resource files.
- Integrated SMTP for sending emails.
- Applied Microsoft Identity for authentication and authorization.
- JWT Token.
- Redis (Caching and data store).
- Implementation with Angular.
- Hosted and deployed using ASP Smarter.

WhatsApp Chatbot

- Retrieve Data from database.
- WhatsApp business Cloud API (Facebook Developer).
- Speech To Text.

CRM Serenity Framework

- Serenity Framework
- TypeScript
- c#.NET

Skills

FrontEnd

- Markup & Styling: HTML5, CSS3, and Sass.
- Frameworks & Libraries: Bootstrap 4, Bootswatch, and Materialize
- JavaScript Ecosystem: JavaScript, jQuery, jQuery UI, and jQuery Plugins.
- Advanced FrontEnd: TypeScript, and Angular 20.

BackEnd

- Languages & Frameworks: C#.NET, ASP.NET Core MVC, and ASP.NET Core API.
- API Tools: Swagger, Postman.
- Data Access: LINQ, Entity Framework Core (Code First & Database First)
- Architecture & Patterns: Design Patterns, Unit of Work, Repository Pattern, and 3-Tier Architecture.
- UI Controls: jQuery DataTable.
- Security: JWT Token.
- Frameworks & Tools: Serenity Framework, Redis.
- Version Control: Git.

Database

- Database Management: SQL Server.
- Reporting: SSRS (SQL Server Reporting Services).

Business & Process

- Documentation: BRD (Business Requirements Document), and SRS (Software Requirements Specification),
- Mockups Methodologies: Scrum, Sprint, and Agile.
