

Order Management Flow Specification

Business Model Overview

- The platform acts as a **connector** between **vendors** (restaurants, pharmacies, banks, etc.) and **delivery companies**.
- The owner also operates a **delivery company**, ensuring an integrated logistics network.
- The model is designed to be **scalable** beyond Kuwait, allowing future expansion.
- The first integration will be with **Ordable Application**.

Vendor & Delivery Company Management

1. Vendor Management

- **Admin adds vendor categories** (e.g., restaurant, pharmacy, bank, etc.).
- **Vendors are assigned to a category** and configured with:
 - **Delivery methods** they support (e.g., motorcycle, truck, bus, etc.).
 - **Multiple branches** and exact branch locations.
 - **Cash-on-delivery (COD) limit**, restricting the amount of money they can hold at any time.
 - **Vendor Management System**, allowing order tracking, payments, and driver coordination.

2. Delivery Company Management

- **Admin adds delivery companies** and their supported **delivery methods**.
- **Admin registers vehicles** under each method and assigns them to drivers.
- **Driver Management:**
 - Each driver has a **complete profile** (name, contact, vehicle details, compliance documents).
 - Admin sets a **COD limit per driver** to control the cash they can hold.
 - The system **shares relevant driver information** with vendors.

Order Lifecycle

1. Order Creation & Allocation

- When a customer places an order through **Ordable**, the system receives:
 - Order details (items, price, payment method, etc.).

- **Customer information** (location, name, phone...etc).
- **Vendor & branch information.**
- **Payment status** (COD or prepaid).
- The system calculates an **initial estimated time of arrival (ETA)**.

Intelligent driver assignment based on:

- Proximity to vendor
- Driver ratings and performance metrics
- Current workload and capacity
- Driver specialization (if required for specific order types)
- The system **prioritizes drivers** based on an algorithmic score.
- If no suitable driver is found, the **search radius expands** until a driver accepts.
- Once a driver **accepts**, the system **notifies the vendor** with driver details.

2. Order Execution

- The system marks the driver as **arrived** when they are within a set distance (e.g., 500 meters).
- **Vendor confirms pickup**, and the driver **starts the journey**.
- The system **updates the ETA** based on current traffic conditions and route.
- The driver **receives customer location & contact**.
- Upon arrival, the driver **marks the order as delivered**.
- **Customer receives a unique code** via SMS/WhatsApp to share with the driver.
- The driver **enters the code** to confirm delivery and complete the order.
- **Customer provides rating and feedback** for both vendor and driver.

3. Order Modification & Returns

- Customers can **modify orders** before pickup with:
 - Options to add/remove items
 - Change delivery address (within limits)
 - Update delivery time preferences
- Modifications trigger **updates to vendor and driver**.
- At delivery, customers have **delivery confirmation options**:
 - Complete acceptance
 - Partial acceptance (specific items rejected)
 - Full rejection
- For rejected orders, the system initiates a **return logistics process**:
 - Driver records reason for rejection
 - System notifies vendor of returned items
 - Return is tracked back to vendor
- The system automatically processes **refunds** for rejected items based on payment method.

●

4. Handling COD & Payments

- Vendors have a **COD holding limit**; when exceeded, they must top up their wallet.
- Delivery fees are collected:
 - **Prepaid model**: Vendors deposit an estimated amount, deducted per delivery.
 - **Postpaid model**: Vendors receive invoices (weekly/monthly) for completed deliveries.
 - **COD Orders**: Fees deducted once orders are delivered and confirmed.

Driver Offline Scenarios

1. Before Order Assignment

- If a driver is offline, **they are excluded** from order allocation.

2. After Order Acceptance but Before Pickup

- The system **automatically reassigns** the order to another driver.
- The vendor is notified of the new driver.

3. After Pickup but Before Delivery:

- The system waits for X minutes for reconnection.
- If the driver remains offline, the system:
 - Attempts to track last known GPS location
 - Contacts the driver via alternative channels (call, SMS)
 - Triggers an alert to the admin dashboard
- If driver location has changed or is uncertain:
 - Admin initiates emergency protocols
 - System notifies the vendor and customer of potential delay
 - Admin may contact driver directly through secondary contacts
 - If necessary, admin can mark order as potentially compromised
- For order reassignment:
 - If driver reconnects and confirms current location, new driver picks up from there
 - If driver cannot be reached, admin may:
 - Declare order lost and initiate replacement from vendor
 - Dispatch new driver to original vendor for a new pickup
 - Process refund/compensation to customer

Escalation Paths

- **Tiered escalation system** based on issue severity:
 - **Low severity:** Handled by first-level support (automated or entry-level staff)
 - **Medium severity:** Escalated to supervisors
 - **High severity:** Requires management intervention
- **Automated issue tracking** system records:
 - Issue type and description
 - Actions taken
 - Resolution time
 - Responsible personnel
- **Recurring issues** trigger system flags for process improvement review.

Driver Escalation Protocol

Vendor-Initiated Escalation

- **Escalation Triggers for Vendors:**
 - Driver significantly delayed in arriving at pickup location
 - Driver unresponsive to vendor communications
 - Driver behavior issues at pickup location
 - Driver refusing to follow handling instructions
- **Vendor Escalation Process:**
 - Vendor accesses "Driver Issue" option in vendor portal
 - Selects specific issue category and urgency level
 - Provides details of the situation
 - System immediately flags order as "Vendor Escalated"
 - If marked "Urgent," automatic notification sent to admin dashboard
 - Admin responds based on urgency level (immediate for high, within 15 minutes for medium)
 - Vendor receives confirmation that escalation is being addressed

Customer-Initiated Escalation

- **Escalation Triggers for Customers:**
 - Driver significantly off-route or stationary for extended period
 - Driver unresponsive to customer communications
 - Concerns about driver behavior or safety
 - Order shows "out for delivery" for excessive time
- **Customer Escalation Process:**
 - Customer accesses "Help" or "SOS" button in tracking interface
 - Selects issue type from dropdown menu
 - Can optionally provide text details
 - System immediately flags order as "Customer Escalated"
 - Customer receives immediate automated response with ticket number

- Based on issue severity:
 - Critical issues (safety concerns) trigger immediate admin intervention
 - Delivery timing issues may first attempt driver communication, then escalate if unresolved
 - Customer receives updates on resolution steps being taken

Admin Response to Escalations

- **Escalation Monitoring:**
 - Dedicated dashboard section for escalated orders
 - Color-coded by severity and time since escalation
 - Automatic prioritization of older and higher-severity issues
- **Resolution Protocols:**
 - Direct contact with driver via call
 - Ability to remotely check driver location and status
 - Option to reassign order if driver issues cannot be resolved quickly
 - Documentation of resolution steps taken
 - Follow-up communications to both vendor and customer
- **Post-Resolution:**
 - Automatic performance record update for driver
 - Escalation patterns trigger driver reviews
 - System logs incident details for pattern recognition
 - Customer may receive compensation based on issue severity

Driver Evaluation System

Customer Review Process

Rating Interface

- After delivery completion, customers receive a **prompt for driver review** via:
 - Mobile app notification
 - SMS with review link
 - Email summary with feedback option
- Review interface includes:
 - **Star rating** (1-5 scale)
 - **Quick-select feedback** options (on-time, polite, followed instructions, etc.)
 - **Free-text comment** field
 - **Photo upload** option for delivery evidence (if needed)

Review Categories

- **Delivery Timeliness:** Was the delivery completed within the expected timeframe?
- **Communication:** Was the driver responsive and communicative when needed?

- **Professionalism:** Was the driver polite and professional?
- **Order Handling:** Was the order delivered in good condition?
- **Issue Resolution:** If there were problems, how well did the driver handle them?

Incentives for Customer Reviews

- Small discount on next order for completed reviews
- Loyalty points for detailed feedback
- Review reminders that expire after 24 hours to encourage timely feedback

Vendor Review Process

Rating Interface

- Vendors can rate drivers after each pickup via:
 - Vendor portal dashboard
 - Quick-rating option at order handoff
 - Batch review option for multiple deliveries by same driver

Review Categories

- **Pickup Timeliness:** Did the driver arrive at the vendor location on time?
- **Preparedness:** Did the driver have appropriate equipment (bags, carriers, etc.)?
- **Professionalism:** Was the driver courteous and professional?
- **Vendor Instruction Compliance:** Did the driver follow specific handling instructions?
- **Documentation:** Did the driver properly complete any required paperwork?

Vendor Rating Tools

- Option to save "preferred drivers" for future orders
- Ability to block problematic drivers from future assignments
- Notification system for when previously flagged drivers improve performance

Driver Rating Aggregation and Impact

Rating Calculation

- Overall driver rating calculated with:
 - 60% weight on customer reviews
 - 40% weight on vendor reviews
 - Rolling average of last 50 deliveries
 - Automatic filtering of outlier ratings

Performance Tiers

- **Elite Driver (4.8-5.0):** Priority for premium deliveries, bonus pay rates

- **Preferred Driver** (4.5-4.7): Good standing, regular access to orders
- **Standard Driver** (4.0-4.4): Normal order access
- **Probationary Driver** (3.5-3.9): Limited to certain order types, subject to additional monitoring
- **Under Review** (<3.5): Required coaching, limited order access, potential deactivation

Rating Consequences

- Automatic incentives for high-rated drivers:
 - Higher percentage of premium/high-value orders
 - Priority in order assignment during peak hours
 - Bonus payment opportunities
 - Recognition programs (Driver of the Month)
- Corrective actions for low ratings:
 - Training requirements
 - Temporary reduction in order volume
 - Mandatory check-ins with supervisors
 - Potential removal from platform if issues persist

Review Transparency and Fairness

Driver Visibility

- Drivers can see:
 - Their current overall rating
 - Anonymous individual reviews
 - Performance trends over time
 - Specific improvement areas
 - Comparison to area average (without identifying other drivers)

Dispute Resolution

- Drivers can contest unfair reviews through:
 - Appeal process for demonstrably unfair ratings
 - Evidence submission (photos, GPS records)
 - Third-party review of contested ratings

Continuous Improvement

- Rating system regularly evaluated and updated based on:
 - Driver feedback
 - Vendor input
 - Customer satisfaction metrics
 - Industry best practices

Notifications & Tracking

System Notifications

- **Admin and vendor web notifications** for:
 - New orders
 - Status changes
 - Exception alerts
- **Driver mobile push notifications** for:
 - Order assignments
 - Route updates
 - Customer communications
- **Emergency notifications** for:
 - Order failures
 - System outages
 - Security alerts
-
- **Customer Notifications:**
 - WhatsApp & SMS updates.
 - Live delivery tracking links.

Error Handling & Dispute Resolution

- **Assignment Failures:**
 - No available drivers → Expand search radius.
 - Vendor unavailable → Auto-cancel or reschedule.
 - Payment issues → Notify vendor and customer.
- **Execution Failures:**
 - Driver cancellation → Auto-reassign order.
 - Delivery issues → Admin intervention required.
 - Customer unreachable → Attempt contact X times before escalation.
